## NOVEMBER 2021 SUMMARY

### Monthly Recap

The S&P 500 index (SPY) posted a loss of -0.69% last month November. Investors were concerned about the Omicron strain and increasing inflation fears. The Fed stated that the inflation is not considered to be **transitory** and accelerated tapering is an option.

The European Central Bank (ECB) has still the opinion that this phase is temporary. European investors were not convinced and alike the US-investors concerned about lockdowns and the COVID spread. The S&P Europe 350 finished with a loss of 2.5%, down more than 5% from its mid-month highs.

The inflation-rate is certainly exceptional high and especially concerning for growth stocks. Countries and others, such as mortgages owners, with a high debt will in the end benefit from a high inflation.

It is up to the FED and ECB to avoid stagflation!

## November Performances

As indicated, the S&P 500 index lost 1% in November and is up 23.18% for the year 2021. Only the sectors IT and Consumer Discretionary showed a positive return in November.

### S&P 500 Sector Contribution November 2021

The S&P 500 Dividend Aristocrats Index (NOBL) lost -1.8% in November and is up 17.37% for the year. The Dividend Aristocrat Index is trailing the S&P 500 now by **581bp** year to date.

## Historical Performance

The current 10-years annualized return is **14.78%** for the Dividend Aristocrats (NOBL) versus **16.16%** for the S&P 500.

### Historical Performance

Depending on index launch date, all charts below may include back-tested data.

\* Data has been re-based at 100

It is good to keep in mind that over a time-period of 30 years and multiple recessions, the dividend aristocrat's strategy has outperformed the S&P 500 by nearly 2% per year.

The current dividend aristocrats yield is 2.42% well above the 1.30% for the S&P 500 index.

## Europe

In Europe, major indices followed the significant drop in the last few days of the month due to inflation and Omicron & lockdown concerns. The S&P Europe 350 did hit another all-time high in October but lost 2.5% in November. The S&P Europe 350 is now up 19.4% for the year.

The European Dividend Aristocrats were more stable and lost 0.6% and are up 23.22% year-to-date. Clearly outperforming the S&P Europe 350 index this year so far.

Based on the 10 years annualized total returns of the European Dividend Aristocrats with 10.39% versus the S&P Europe 350 with 10.05%, the conclusion is that they are almost at par. The current indicated dividend yield for the European dividend aristocrats is 2.52%

## MONEYINVESTEXPERT PORTFOLIOS

---

Our portfolios showed a mixed performance in November. Here is a performance summary on our “Moneyinvestexpert” portfolios:

Our **International Dividend Portfolio** lost 1.06% in US\$ and gained 1.08% in euros in November. Year-to-date the performance is now 29.22% in euros for this Dividend Portfolio. The performance in euros is significantly higher due to exchange-rates, in this case a strong dollar versus the euro.

The **Defensive Dividend Aristocrats** dropped just 0.66% in November, and the total return is now 10.88% in 2021.

Our **retirement portfolio (US)** dropped 1.67% in November, which results in a 12.21% for this year. The benchmark for this portfolio, Invesco’s High Dividend Low Volatility ETF (SPHD), lost 2.61% this month, but is still showing a stronger performance for year-to-date.

Since the start of our retirement portfolio, the outperformance is however significant (read more in the dedicated section).

## INTERNATIONAL DIVIDEND PORTFOLIO DETAILS

Our **International Dividend Portfolio** lost 1.06% in US\$ and gained 1.08% in euros in November. Year-to-date the performance is 29.22% in euros for this Dividend Portfolio. The performance in euros is significantly higher due to exchange-rates, in this case a strong dollar. This portfolio is showing a strong outperformance compared to the year-to-date performance of the S&P 500 Europe index of 19.41%.

Since its inception in 2009, the portfolio has returned 412% in US\$ and 531% in euros, excluding reinvesting dividends.

Last month's performance dashboard shows a mix with respect to performance. Five holdings closed this month up, while the other ten were down. Wolters Kluwer showed a strong performance and gained almost 10% in November. Investors rewarded strong growth figures, reported early November and an improved outlook help the stock price to go up this month.

Year-to-date, 12 out of 15 stocks are showing a positive price return, which is excluding dividends received.

Figure 2: Summary International Dividend Portfolio

## About

The International Dividend Portfolio objective is to generate dividend income every month, based on international dividend growth stocks, and over the long-term preserve and grow the invested capital. The total return is expected to follow the MSCI World index and a dividend growth rate between 4%-9%.

Holdings are rarely sold as long as dividend pay-outs are not cut and managed with a “buy-and-hold investor” mind-set. The International Dividend Portfolio contains mainly US and European stocks, so mature markets, but the related companies will often have exposure to emerging markets as well.

## Getting started

We created the International Dividend Portfolio, so customers can follow a selection of international dividend stocks. Some investors could mirror the portfolio holding for holding, but others use the list to generate investment ideas and make sense of trends and risk/returns in their own portfolios.

If you decide to mirror the portfolio, our recommendation would be to invest equally across all holdings. This provides diversification between stocks, sectors, and currencies. Preferably the value of one individual stock is always below 5%-8%. Some holdings may appear undervalued and some overvalued, so we provide some guidelines/rules when to buy or not to buy (see section “Timing”). Please take into account that there is currency risk and a potential dividend tax (withholding tax) for certain (US)-investors.

## Performance & Dividend receivable

In 2009 the virtual International Dividend Model Portfolio started with €100,000 or \$ 140,000, 10 US dividend stocks, and 5 European dividend stocks. The holdings value grew by 15.5% annually year (CAGR) in euros and 13.2% in dollars, as you can see in the table below. Due to currency fluctuation, the European investor benefited more from the dollar holdings.

	Portfolio Value (€)	Portfolio Value (\$)
Start 2009	€ 100,000	\$ 140,000
End 2017	€ 378,350	\$ 454,852
End 2018	€ 385,708	\$ 441,867
End 2019	€ 487,797	\$ 547,162
End 2020	€ 489,242	\$ 600,300

Please note that re-investing the dividends received would result in a higher performance. ([the power of dividends and compounding](#))

## Dividend – Payment Schedule

One of the objectives of our dividend portfolio is to receive a dividend every month, below is an overview of the month in which the shares normally go ex-dividend. The diagram gives you more details on the ex-dividend months per stock. For example, Realty Income is a monthly dividend payer, while all US stocks are paying quarterly. L'Oreal (France) and Roche (Switzerland) pay annually.

## Dividend Growth

Another objective of our dividend portfolio is dividend growth. The aim is a dividend growth rate between 4%-9%. Dividend growth stocks have been among the best long-term performers in the market, when [payout ratio and high yield](#) are monitored.

The average dividend growth rate for all holdings is 6.6%. Here are the current figures for our international dividend portfolio.

## Timing (avoid, hold, buy)

This portfolio has been compiled for longer-term investments for a minimum of 5 years and preferably 10 years or longer investment horizon. The signal-list (see next page) is based on several (trend-following) rules, as detailed below:

- **Buy**, if the trend is upward and the 200-day moving average (MA-200) is lower than the current rate (intersection).
- Accumulate, **add** additional stocks if the price is above the MA-200 and the performance of the past month was negative.
- **Hold**, Hold (All-Time High), when the trend is up but not a buy signal.
- Do not buy/avoid, if the current trend is downwards and the current price is below the MA-200.
- Neutral, movement around MA-200, no clear trend

Figure 6: Schematic overview of trend timing

Furthermore, there are several fundamental factors that may cause a share to be replaced. Such as, for example, a substantial reduction in dividend payments.

Below are signals per stock per **11/30/2021**. Changes compared to last month are in bold:

## About

Preserve capital and deliver a safe dividend yield above the market's average is the main objective of our Retirement Dividend Portfolio. Dividend growth is expected to be moderate, and the portfolio should keep up with the broader market over time. The composition of this conservative portfolio for retirees is constructed based on the following principles:

- Diversification in several sectors and minimum exposure to 20 stocks
- Average dividend yield 2.5% – 4.5%
- Dividend growth rate 4%+
- Dividend score above 60
- Average loss ratio 1.8-2.5 (see defensive aristocrats)

Holdings are rarely sold and managed with a “buy-and-hold investor” mind-set. The aim is to buy and hold positions for at least 3-5 years. If the fundamentals of the company structurally change or stock valuation reaches excessive levels, a holding could be sold. The portfolio is expected to underperform in bull markets and outperform in bear markets due to its defensive nature.

## Getting started

We created the Retirement Dividend Portfolio, so customers can follow a selection of “conservative” dividend stocks. Some investors could mirror the portfolio holding for holding, but others use the list to generate investment ideas and make sense of trends and risk/returns in their own portfolios.

If you decide to mirror the portfolio, our recommendation would be to invest equally across all holdings. This provides diversification between stocks, sectors. Preferably the value of one individual stock is always below 5%-8%. Some holdings may appear undervalued and some overvalued, so we provide some guidelines/rules on when to buy or not to buy. Please take into account that there is currency risk if you are a non-us investor.

### About

The Defensive Dividend Aristocrats' objective is to outperform the Dividend Aristocrats over any five-year rolling time horizon, especially in bear markets.

The maximum draw-down (mdd) should be lower for the defensive stocks.

The idea behind the Defensive Dividend Aristocrats is to invest in 10 Dividend Aristocrats that are selected based on price-return and risk-ratios at year-end. Combined with the dividend growth characteristics of all Aristocrats, this should result in a comfortable set of companies for a long-term dividend portfolio.

The Defensive Aristocrats are selected on performance-based criteria:

- **Geometric Annual performance** of the last 10 years (GeoAP10)
- **Win-ratio**, the chance of a positive monthly performance
- **Loss-ratio**, the chance of a monthly loss multiplied by the weighted average loss

## Optimizing risk-return

The diagram below shows that the "blue" stock should be preferred over the "yellow" since the performance (Geometric Annual performance of the last 10 years) is higher and the risk (Loss-ratio) is lower.

The 10 Dividend Aristocrats with the best performance-risk characteristics and in an up-trend are selected at every year-end for the holding period of a year, to be part of the defensive dividend aristocrats. The lower the loss-ratio the better, close to 1.0 is optimal.

## Getting started

We created the Defensive Dividend Aristocrats so customers can follow a selection of dividend aristocrats. Some investors could mirror the portfolio holding for holding, but others use the list to generate investment ideas and make sense of trends in their own portfolios.

If you decide to mirror the portfolio, our recommendation would be to invest equally across all holdings. One should always be aware that 10 stocks only is probably not sufficient with respect to diversification. Some holdings may appear undervalued and some overvalued since the 10 dividend stocks are selected once per year.

## The top-10 Dow Jones 30 Stocks to Buy December according to Wall Street.

The Dow Jones Industrial Average (DJIA) consists of 30 blue-chip stocks. For dividend investors, this is an interesting list, since most “Dow-30” companies do pay a dividend. Many of those 30 stocks are able to increase their dividend for several consecutive years. The top-yielding Dow stocks all have dividends that are well above average yields in the stock market. Therefore, they could be a reason for income investors to consider buying them, next to the fact that the Dow stocks are also blue chips.

The screener below lists the 30 companies including their last price, the 1-year average price target estimated by analysts and the potential (%) based on the difference between the last price and the Wallstreet price target.

This list could help active dividend growth investors to identify potential bargains and which stocks to avoid.

## The 10 Best Dividend Aristocrats for December based on future return

The ranking of the top 10 Dividend Aristocrats to buy today, is based on expected annual returns through 2026, so their **5 years future total returns**. These 10 stocks represent attractive long-term buys for dividend growth investors.

To estimate the future total return the following values are added together:

- Estimated EPS growth next 5 years, as an indicator for the average dividend growth
- Average dividend yield, assuming
- Extra return due to over/undervaluation

The table below lists the top-10 Dividend Aristocrats with the highest estimated future total return for the next 5 years (CAGR), the EPS estimate for the next 5 years, and the extra positive or negative return due to over/undervaluation. The dividend score is also a factor that should be considered when evaluating those dividend stocks.

## Dividend Aristocrats by loss-ratio

The **Defensive Dividend Aristocrats'** objective is to outperform the Dividend Aristocrats over any five-year rolling time horizon, especially in bear markets. The maximum draw-down (mdd) should be lower, so less volatility than the broader market. The main is to show that next to dividend growth, price-return and risk ratios are also important.

The idea of the Defensive Dividend Aristocrats is to invest in **ten** Dividend Aristocrats that are selected based on price-return and risk-ratios at year-end. Combined with the dividend growth characteristics of all Aristocrats, this should result in a comfortable set of companies for a long-term dividend portfolio.

The Defensive Aristocrats are selected on performance-based criteria:

**Geometric Annual performance** of the last 10 years (GeoAP10)

**Win-ratio**, the chance of a positive monthly performance

**Loss-ratio**, the chance of a monthly loss multiplied by the weighted average loss

## Dividend Kings estimated future total return

The estimated future total return data is available for the dividend kings and dividend aristocrats in our database. The **estimated EPS growth for the next 5 years** is also presented. Estimating the expected 5 years future total returns are based on two main components for dividend growth stocks:

- Dividend yield
- Change in share price

The change in a stock (share) often comes from dividend growth which is mainly driven by earnings per share growth and the difference between the share price and the fair value. The expected price-to-earnings ratio over the next 5 years or the average dividend yield over the last 5 years is often used to estimate the change in the share price. The assumption made is that the share price will return over time to this average value.

To estimate the future total return the following values are added together:

- Estimated EPS growth next 5 years, as an indicator for the average dividend growth
- Average dividend yield, assuming
- Extra return due to over/undervaluation

The table below lists the top-10 Dividend Kings with the highest estimated future total return for the next 5 years (CAGR), the EPS estimate for the next 5 years and the extra positive or negative return due to over/undervaluation.
